Business Recommendations

Growth, engagement and retention actions derived from the data

1. Boost acquisition in Northern Cape

Northern Cape shows the lowest distinct-user base. Localised campaigns, retailer partnerships and regional-language promos can unlock incremental subscribers at low cost.

2. Programme premium content in the afternoon

The afternoon window captures the largest share of sessions. Anchor tent-pole releases and premium ad inventory here for maximum reach.

3. Amplify "Supersport Live Events"

Supersport Live Events drives the most sessions. Cross-promote adjacent titles, bundle it into premium tiers and use it as the hook in win-back journeys.

4. Fill the Mon gap

Mon is the quietest viewing day. Weekly exclusives, live watch-parties or episodic drops on Mon can flatten the demand curve.

5. Retention play for Gauteng

Your largest concentration of viewers sits in Gauteng. Deploy loyalty tiers, referral rewards and churn-risk outreach there first for the highest absolute save rate.

6. Personalised recommendations

Average session duration is 8.6 minutes and sessions-per-user are long-tailed. A lightweight recommender converting casual viewers into daily habits is the single highest-leverage CVM investment.

7. Weekend family bundles

Weekend sessions run longer per view — package family co-viewing blocks and weekend-only add-ons to monetise the extended dwell time.

8. Youth-first mobile campaigns

Youth and Kids segments respond to short-form, social-first content. A mobile-first campaign with clip-sharing can lift both reach and frequency.
