

Bright TV Viewership Analysis

Project Overview

This project analyses Bright TV's customer viewership data to uncover behavioural patterns, audience demographics, channel performance, and viewing trends. The objective is to provide data-driven recommendations that help Bright TV grow its subscription base through Customer Value Management (CVM). The project follows the complete analytics lifecycle—from data inspection and cleaning to SQL analysis, dashboard development, business insights, and executive recommendations.

Business Problem

Bright TV aims to increase its subscriber base during the current financial year by analysing customer viewing behaviour, audience demographics, content consumption trends, channel performance, customer engagement opportunities, and strategic growth initiatives.

Objectives

- Analyse customer viewing behaviour
- Understand audience demographics
- Identify the most popular TV channels
- Discover weekly and daily viewing patterns
- Evaluate geographic audience distribution
- Identify growth opportunities
- Produce executive-level dashboards and recommendations

Project Workflow

- Problem Definition
- Data Inspection (EDA)
- Data Cleaning
- SQL Data Transformation
- Dashboard Development
- Business Insight Generation
- Executive Recommendations

Technologies Used

- SQL (Databricks SQL)
- Microsoft Excel
- Power BI
- Data Cleaning
- Exploratory Data Analysis (EDA)
- Data Visualisation
- Customer Value Management (CVM)

Dataset

- 1,000+ customer viewing records
- 17 television channels
- 9 South African provinces
- 3 months of viewing activity
- User demographics, age, gender, province, race, channel viewed, date/time viewed and viewing duration

Dashboard Insights

- Channel Performance
- Audience Analysis
- Weekly Viewing Patterns
- Geographic Analysis
- Daypart Analysis

Key Findings

- Sports content is the strongest engagement driver.
- March recorded the highest overall viewership.
- Youth represent the largest customer segment.
- Gauteng has the highest concentration of viewers.
- Female viewers remain underrepresented.
- Kids and pensioners present untapped growth opportunities.
- Late-night viewing offers the greatest opportunity for improvement.

Business Recommendations

- Invest in additional sports broadcasting rights.
- Refresh underperforming entertainment channels.
- Expand children's programming.
- Introduce content targeting pensioners.
- Develop more female-focused programming.
- Increase engagement during low-viewership periods.

Skills Demonstrated

- SQL
- Data Cleaning
- Data Transformation
- Exploratory Data Analysis
- Data Visualisation
- Dashboard Design

- Business Intelligence
- Customer Analytics
- Customer Value Management (CVM)
- Executive Reporting
- Business Storytelling
